BERENDS HYDRAULIC POST DRIVER

- Operates from a single set of standard remote hydraulics, either directly from tractor or via an optional control valve mounted on the unit.
- Will drive 9'6" post when sitting on the ground.
- Dolly weight approx 160kg. Unlike some models, there is very little friction/resistance on the weight movement - creating a greater "pounding force".
- Easy to adjust sideways tilt either via ratchet or optional hydraulic ram. Backward/forward tilt adjusted through tractor top link.
- Protective cage is connected to two safety catches on main beam. The weight can not come down when cage door is open, making it one of the safest units on the market. Extremely quick and easy to operate.
- A sliding post clamp is fitted to the main beam to keep post straight when driven.

0263 Berends Hydraulic Post Driver (450kg)

POST BORERS

MODEL32 FENCEMATE MODEL 32

- Hydraulic operation with reverse
- Wide handles for greater control
- Variable speed
- Includes hoses
- Weight 8kg

TED-270RS TANAKA POST BORER

- One man operational post borer with 1.5hp (1.1kw) motor and reverse gear
- Accommodates 3/8" - 1 1/4" augers
- Dual position front handle
- Supplied bare, without auger
